Survey

Please answer the following questions in as much detail as you can provide. This information will be useful to me in planning the course.

1. Do you have any prior experience in programming computers? If so, briefly describe your experience.

2. I assume most of you are familiar with gaming, instant messaging, Microsoft Word or other word-processing program, e-mail, surfing the Web, etc. Please tell me if this is not the case!

   Do you have any experience working with computers that goes beyond the standard applications listed above? If so, describe it.

3. Is there anything about computers that you have always wondered about but never had an opportunity to ask? If so, ask it right now, right here! (I can't guarantee that I'll have answers to all these questions, but I'll try to track them down.)

4. What would you like to learn in this course?

5. If there is anything else you want me to know, either about you or your concerns about the course or whatever, please comment here.
